

**TauRIS Software**  
**TS 8.10-CZ / 5315****Nominations in Czech's terminal software TS 8.10-CZ / 5315:**

With this software version a fancier is able to nominate his pigeons for the next race(s).  
Nomination means the expected order list for arrival.

The nomination starts by pressing <Start> and <1>. Now the fancier has to select a race point for which he wants to nominate his pigeons (refer to entry and race points). Nominations can be done for each race point which entry isn't finished.

```
Misto zav. : 00
98 Brno
01 Praha
02 Liberec
```

After choosing a racepoint (e. g. 01 Praha) fancier's pigeons can be selected by arrow buttons (scrolling) or by entering the last 4 digits of pigeon's foot ring like in the "view" menu. The first line shows the number of the selected race point, the second line shows the current pigeon, the third line shows "Zavod01" and "000" if this pigeons is assigned and yet not nominated or "---" if this pigeon is blocked for nomination in case of being entered or nominated for another race and line four shows the race point's number and nomination number for the current pigeon e. g. " 00 000" for a not nominated pigeon or "Set 02 003" for a nominated one.

```
Misto zav. : 01
CZ 05-1234-0005
Zavod01 Nom:
00 000
```

Pressing "#" (2 times) the current pigeon is selected, line three changes to "Zavod01 Nom: 000#" and a number between "1" and "255" can be entered and confirmed by pressing "#".

```
Misto zav. : 01
CZ 05-1234-0005
Zavod01 Nom:009#
Ok! 01 009
```

If the number is accepted line four shows e.g. "Ok! 01 009" (01 is the race point and 009 the nomination). When selecting another pigeon the fancier can see in line 4 whether this pigeon is nominated (e. g. "Set 01 009") or not (e. g. " 00 000"). Entering a nomination number that is already used for the current race point will be blocked. In this case line 4 shows "Neni mozno!" and another number has to be entered.

It is possible to change pigeon's nomination by entering a new number.

The only nomination number that isn't blocked is "000". It can be used more than one time. A "000" nominated pigeon will be appended to the nominated ones in the list and will be treated like not nominated pigeons.

Having finished the nomination(s) pigeons can be entered. Not nominated pigeons will be appended to the nominated ones. Not entered pigeons will be deleted out of the nominations and treated like a gap. They won't appear on the entry list.

While printing out a entry, clocking or control list all gaps will be filled and pigeons will rise in rank. During this operation "Cekejte...." will be displayed in line 4 of the terminal.
